

I B.E. (Mechanical Engg. & E&I Engg.)
Class Test – II November 2023
COR2C5: Computer Programming in C++

MM: 20 Marks
Duration: 70 minute

Attempts any 10 question only

1. What is inline function and function overloading? Explain in brief with suitable examples 2 M
2. What is a pointer? Write its declaration syntax and its example. 2M
3. What is operator overloading? Explain in brief examples 2M
4. What is meant by structure? Write its declaration syntax and its example. 2M
5. Write a program to prints a Fibonacci series using recursion as follows 2M
0, 1, 1, 2, 3, 5, 8, 13, 21, 34.
6. Write a program to read 5 data from keyboard in an array and print them on screen using a pointer (both reading and displaying data). 2M
7. Write a program to test prime number or not. Read input from keyboard. 2M
8. Write a program to print student record which have student roll number, name and age using structure. (you may use only one record also) 2M
9. Write the program to generate 5 random number of 3 digits between 100 to 200 (add two more <cstdlib> and <ctime> headers) 2M
10. Explain use of dot (.) operator and arrow (->) while using structure. 2M
11. Write a program to concatenation of two given strings 'Hello' and 'World' and print together as Hello World 2M
