

28-11-2023 Test-2 BE I Year CSE A, CSE B
1ACRC2 Applied Chemistry and Environmental Science
Max marks: 20, Time: 70 mins
Note: Answer any four questions carrying equal marks.

Q.1 Define and classify Water hardness. Why it is expressed in ppm CaCO_3 equivalents? How much hardness (in standard unit) will be contributed by dissolving 68 mg. of CaSO_4 in 1 lit. distilled water?

Q.2 What are the roles of EDTA, EBT and buffer solution in water hardness determination titration? 20 ml of hard water sample requires 15 ml of N/100 EDTA solution. Calculate total hardness of water sample. Is this water fit for drinking?

Q.3 Greenhouse effect is essential for sustaining life on earth but Global warming is causing various adverse effects to our environment, but science of both is same. Justify this statement with evidences.

Q.4 Explain the various R's useful in pollution control and environmental conservation. Give one example of each R.

Q.5 Explain the terms (any 5):

1. Distilled water 2. TDS 3. Priming 4. EIA 5. SPM and RSPM 6. Troposphere
