

Class Test II January 2023
1st Year Electronics and Telecomm. Engineering(Section A & B)
2CORS Computer Programming in C++

Time: 70 min

Max Marks: 20

Note: Attempt any four questions. All questions carry equal marks.

- | | | | |
|---|---|---|---|
| 1 | a | Write a C++ program to find whether a string is palindrome or not. | 3 |
| | b | Define Recursion with example | 2 |
| 2 | a | Explain the following string functions(any 2)
i. strcat() ii. strcmp() iii. strcpy() | 3 |
| | b | Define structures with example | 2 |
| 3 | a | Write C++ code for declaring a structure called "Distance" with data members: feet and inches. Declare a pointer to the structure and access values of feet and inches using the pointer. | 3 |
| | b | What is the relation between pointers and arrays? | 2 |
| 4 | a | Do as directed:
iv. Declare an integer variable and print its address without using pointer.
v. Declare a char variable and print its address using pointer.
vi. Declare an integer pointer and dynamically allot memory using new operator | 3 |
| | b | What is meant by data encapsulation and data abstraction? | 2 |
| 5 | a | Write C++ code for creating a class named "Box" with
iii. Private integer data members: height, width, length
iv. Public parameterized constructor and member function: volume.
In the main() function, instantiate object of class Box, initialize its values and print the volume. | 3 |
| | b | Define class and object. | 2 |
