

Class Test III February 2023
1st Year Electronics and Telecomm. Engineering (Section A & B)
2COC5 Computer Programming in C++

Introduction to Programming

Time: 70 min

Max Marks: 20

Note: Attempt any four questions. All questions carry equal marks.

- 1 Write C++ code for creating a class named "Box" with 5
 - iii. Private integer data members: height, width, length
 - iv. Public parameterized constructor and member function: volume.In the main() function, instantiate object of class Box, initialize its values and print the volume
- 2 Write C++ code for creating a class named Distance with 5
 - iii. Private data members :feets and inches.
 - iv. Public member fuctions: getdata(), addition to get sum of two distances.Pass objects as parameters in function "sum"
- 3 Write C++ code for creating a class named Shape, which allows overloading of function "area" 5
for calculating area of Rectangle and Square(objects of class Shape)
- 4 Write C++ code for creating a class named Complex which allows addition of two complex 5
numbers using overloaded "operator +"(binary addition).
- 5 Write C++ code for creating a class named Employee inherited publically from class Person. 5
Class Person has:
 - iii. Private data members : name, age, gender
 - iv. Public member fuctions: getdata(), printdetails().Class Employee has:
 - iii. Private data members: emp_id, salary.
 - iv. Public member fuctions: getdata(), printdetails().Get name, age, gender, emp_id and salary from user and print them as well.
