

Institute of Engineering & Technology

Test I – 2APRC2 Applied Physics

I BE : ETC-A and Mech Engg.

Time : 60 Min.

Max. Marks : 20

Note : Attempt any two questions.

1. Differentiate between Interference and Diffraction of light waves. 10
 2. Describe the Newton's Ring Experiment on the basis of (a) Construction
(b) Principle used (c) Result (d) Application. 10
 3. Light of wavelength 6×10^{-5} cm falls on a screen at a distance of 100 cm from a narrow slit. Find the width of the slit if the first minima lie 1.0 mm on either side of the central maxima. 10
-

Institute of Engineering & Technology
BE I YEAR (IT-A & IT-B)
Test # 1 Applied Physics

Total Marks : 20

Time : 1 Hour

Note : Attempt any two questions.

- 1.) Explain the meaning of Diffraction of light waves. Differentiate between Interference and Diffraction of Light waves. 10
- 2.) Light of wavelength 6×10^{-5} cm falls on a screen at a distance of 100 cm from a narrow slit. Find the width of the slit if the first minima lie 1.0 mm on either side of the central maxima. 10
- 3.) Describe the Newton's Ring experiment and Discuss its different applications. 10
