

B.E. II (Computer Engineering) October 2023
Class Test – II (CER3C2: Object Oriented Programming)

Duration – 70min.

MM-20

Q.1 Differentiate between array and Vector.

4

Q.2 Consider the following program and what will be the outcome of each. Also justify your answer. **6**

<pre>(i) class Base{ private int data; public Base(){ data = 5;} public int getData() { return this.data; }} class Derived extends Base{ private int data; public Derived() { data = 6; } private int getData() { return data; } public static void main(String[] args) { Derived myData = new Derived(); System.out.println(myData. getData()); }}</pre>	<pre>(ii) import java.util.*; public class Test { public static void main (String [] args) { Vector t = new Vector(); t.add(5); t.add("java"); System.out.println(t); t.clear(); System.out.println(t.firstEle ment()); } }</pre> <i>Not clear</i>	<pre>(iii) package p1; public class Base{ private int multiplier(int data) { return data*5; }} class Derived extends Base{ private static int data; public Derived() { data = 25; } public static void main(String[] args) { Base temp = new Derived(); System.out.println(temp.multiplier(data)); } }</pre>
---	--	--

Q.3 Write a program to count number of words in a given Sentence. (String will be enter by user).

5

Q.4 Differentiate among association, aggregation and composition. Write a program to demonstrate aggregation.

5
