

Duration - 70 Mins.

Note : Make suitable assumptions, if necessary.

- #1 How would you find a maximum key in a binary search tree. Write an algorithm/procedure/code for the same. 2+2
- #2 Give an algorithm/procedure/code to count the number of leaf nodes in a binary tree T. 4
- #3 Write an algorithm/procedure/code for performing depth first search on a graph. 4
- #4 Construct a binary tree for given inorder and preorder traversals.
InOrder = {2,5,6,10,12,14,15} PreOrder = {10,5,2,6,14,12,15}
Also write the logic for generating a binary tree from above traversals. 2+2
- #5 How would you detect a cycle in a undirected graph. Write an algorithm/procedure/code for the same. 2+2
