

Examination December 2023
BE II Information Technology
3ITRC2: Object Oriented Programming

Aman Saxena

Duration: 3 Hrs.

Total number of questions: 05

Max. Marks: 60

Note: All questions are compulsory. Question Q1 consists of 14 parts attempt any 12, question Q2 to Q5 consists of 3 parts attempt any 2 parts. Make suitable assumptions if necessary. The answer should be to the point.

- Q1. 1 _____ live on the heap. 12
- 2 _____ describes what an object knows and what an object does.
- 3 At run time _____ can get changed.
- 4 Every class in Java is either a direct or indirect subclass of _____.
- 5 Constructors do not have _____ but methods do.
- 6 IS-A relationship is used to check whether _____ is right or not.
- 7 To invoke the superclass version of a method from a subclass that's overridden the method _____ key word is used.
- 8 _____ and _____ are two types of packages in java.
- 9 A single try block can have many different catch blocks (write Yes or No)
- 10 A finally block will run regardless of whether an exception is thrown (write Yes or No)
- 11 A class can implement multiple interfaces (write Yes or No)
- 12 Can one do arithmetic operation on a reference variable in java? (write Yes or No)
- 13 In java can we have abstract class without abstract method (write Yes or No)
- 14 Java uses pass by value method (write Yes or No)
- Q2: A. What are constructors? Demonstrates the implementation of following: zero argument constructor, parameterized constructor and constructor overloading. Also explain how constructor and method are different from each other. 6
- B. What are operators? Explain them along with their precedence. 2
- Write a Java program that prints Fibonacci series in reverse order (up to 10 elements). 4
- C. What are control statement? Explain. Write a program for the following scenario. 6
- Admission to a professional course is subject to the following conditions:
- (a) Marks in Mathematics ≥ 60
- (b) Marks in Physics ≥ 50
